DETAILED ACTION

This Office Action is in response to the amendment filed December 18, 2009 for the above identified patent application.

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the matrices being curved (claims 7, 11, and 15) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Petsch (DE 103 46 133).

Petsch teaches a bearing comprising a frame (12) at least partly surrounding two matrices each of a plurality of spheres (18, 20), each matrix when flat having its spheres mounted for rotation in at least part a single plane, the plane of one matrix being parallel to that of the other matrix, each sphere of one matrix contiguous with a plurality of spheres of the other matrix so that rotation of a sphere of one matrix results in counter rotation of a plurality of spheres of the other matrix.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2, 5, 7, 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Petsch (DE 103 46 133).

With respect to claims 2, 5, 13, and 14, the prior art to Petsch does not disclose the balls having the claimed diameter. It would have been within the skill of one in the art at the time the invention was made to modify the size of the balls disclosed by Petsch with balls having a diameter, for example, of 7.5mm or 15mm, motivation being to facilitate in transporting a particular product. Further, varying the ball size would have been within the skill of one in the art so as to provide a bearing device having a predetermined operating capacity.

With respect to claims 7 and 15, Petsch illustrates the ball matrix extending along a flat plane. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the ball matrix of Petsch with a curved shape, motivation being to transport a particular product along a curved path.

Allowable Subject Matter

6. Claims 3-4, 6, 8-11, and 16 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
